membrane prote placenta, heart, li muscle, erasin co clearing of ERAD degradation) sub for mediating its protein), an AAA-/ stress, erasin exp expression leads important functio erasin may be inv	plasmic reticulum (ER) and nuclear envelope in. Expressed in a variety of tissues, such as brain, ver, prostate, kidney, pancreas, lung and skeletal ntains one UBX domain and participates in the fendoplasmic reticulum-associated protein strates. The UBX domain of erasin is responsible direct interaction with VCP (valosin-containing ATPase molecular chaperone. In response to ER ression is induced. The knockdown of erasin to the inhibition of ERAD, suggesting an on of erasin in the ERAD pathway. In addition, olved in Alzheimer's disease, as it is known to urofibrillary degenerating neurons in patients s disease.
