— DATASHEET —

Host: Mouse

Isotype: IgG1

Clonality: Monoclonal

CloneNo.: 6H11

SWISS: Q77HM6

Target: MPXV/A29

Storage: PBS, pH7.4.

Shipped at 4°C. Store at -20°C for one year. Avoid repeated freeze/thaw cycles.

Background: Monkeypox is a rare zoonosis caused by monkeypox virus, which has become the most serious orthopoxvirus and consists of complex double stranded DNA. The cases are mostly in central and western Africa. The pathogenesis of monkeypox is that the virus invades the body from respiratory mucosa, multiplies in lymphocytes, and incurs into blood producing transient venereal toxemia. After the virus multiplies in cells, the cells can invade the blood and propagate to the skin of the whole body, causing lesions.

Applications: ELISA (1:5000-10000)

Reactivity: Monkey
(predicted: MPXV)

Predicted MW.: 12.5 kDa
