coupled recep lysophospholi phosphate (SP EDG-5 (also de high affinity. El preferentially l couple to mult Rho, Phosphol survival, growt through Gi pro EDG-2 is expre- regions, while cerebellum. EL and EDG-5 has tissue and brai hematopoietic	thelial differentiation gene) family of G protein tors consists of eight family members that bind bid (LPL) mediators, including sphingosine-1- P) and lysophosphatidic acid (LPA). EDG-1, EDG-3, signated H218 and AGR16) and EDG-8 bind SPP with DG-6 is a low affinity receptor for SPP. LPA binds to EDG-2, EDG-4 and EDG-7. The EDG receptor iple G proteins to signal through Ras, MAP kinase, ipase C or other tyrosine kinases, which lead to cell h, migration and differentiation. EDG-1 signals teins to activate Akt and is expressed in glioma cells ssed in brain, especially in white matter tract EDG-3 is expressed in cardiovascular tissue and in OG-4 is highly expressed on leukocytes and brain, wide tissue distribution, including cardiovascular n. EDG-6, which is expressed in lymphoid and tissues and in lung, signals through Gi/o proteins, growth related pathways.	s
