
Goat anti Human IgE, PE conjugated

Catalog Number: bs-2226G-PE

Target Protein: Goat anti Human IgE

Concentration: 1.0 mg/ml

Host: Goat

Clonality: Polyclonal

Isotype: IgG

Applications: Excitation spectrum: 496nm,564nm

Emission spectrum: 578nm

Not yet tested in other applications.

Optimal working dilutions must be determined by the end user.

Reactivity: Human

Purification: affinity purified by Protein G

Storage: 10 mM TBS (pH=7.4) with 1% BSA, 0.03% Proclin300 and 50% glycerol.

Store at -20°C for one year. Avoid repeated freeze/thaw cycles.

Background: IgE is the least abundant immunoglobulin in plasma, found at a concentration of less than 0.6 micrograms/ml of normal plasma. Elevated IgE levels are found in patients experiencing severe allergic reactions and parasitic infections. In a myeloma condition, IgE is produced by a single clone of plasma cells. The structure of myeloma IgE, however, is normal, and the immunoglobulin purified from a myeloma source is a useful protein for studying immunoglobulin behavior. The affinity purified IgE reacted only with anti IgE and not with anti IgG, IgA, IgM or IgD by immunodiffusion and IEP techniques. Prepared from myeloma plasma shown to be non reactive for HbsAG, anti-HCV, anti-HBc, and negative for anti-HIV 1 & 2 by FDA approved tests.
