

Recombinant Human Fc gamma RIIA/CD32a (R167), His-Avi (HEK293)

Catalog Number: bs-43209P

Concentration: >1mg/ml

Species: Human

AA Seq: 36-218/317

Predicted MW: 24.1

Mutation Site: H167R

Tags: C-His-Avi

Endotoxin: Not analyzed

Purity: >90% as determined by SDS-PAGE

Purification: AC

Form: Lyophilized or Liquid

Usage Guide H167R

Storage: PBS (pH7.4)

Stored at -70°C or -20°C. Avoid repeated freeze/thaw cycles.

Background: This gene encodes one member of a family of immunoglobulin Fc receptor genes found on the surface of many immune response cells. The protein encoded by this gene is a cell surface receptor found on phagocytic cells such as macrophages and neutrophils, and is involved in the process of phagocytosis and clearing of immune complexes. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2008]

VALIDATION IMAGES

The purity of the protein is greater than 90% as determined by reducing SDS-PAGE.
