ALDOA Recombinant Rabbit mAb**— DATASHEET —**

Host: Rabbit	Isotype: IgG/Kappa	Applications: WB (1:200-1:1000) IHC-P (1:100-500) IHC-F IF ICC/IF (1:20-1:100) Reactivity: Human (predicted: Mouse, Rat) Subcellular Location: Cytoplasm
Clonality: Recombinant	CloneNo.: G5E7	
Target: ALDOA		
Purification: affinity purified by Protein A		
Concentration: 1mg/ml		
Storage: 0.01M TBS (pH7.4) with 1% BSA, 0.02% Proclin300 and 50% Glycerol. Shipped at 4°C. Store at -20°C for one year. Avoid repeated freeze/thaw cycles.		
Background: Research areas: Cancer // Cancer Metabolism // Metabolic signaling pathway < Aldolase A (fructose biphosphate aldolase) is a glycolytic enzyme that catalyzes the reversible conversion of fructose-1,6-biphosphate to glyceraldehyde 3 phosphate and dihydroxyacetone phosphate. Three aldolase isozymes (A, B, and C), encoded by three different genes, are differentially expressed during development. Aldolase A is found in the developing embryo and is produced in even greater amounts in adult muscle. Aldolase A expression is repressed in adult liver, kidney and intestine and similar to aldolase C levels in brain and other nervous tissue. Aldolase A deficiency has been associated with myopathy and hemolytic anemia. Alternative splicing of this gene results in multiple transcript variants which encode the same protein. Cellular localization: Cytoplasmic Tissue Specificity: adult liver, kidney and intestine and similar to aldolase C levels in brain and other nervous tissue.		

— VALIDATION IMAGES —

Blocking buffer: 5% NFDm/TBST Primary Ab dilution: 1:1000 Primary Ab incubation condition: 2 hours at room temperature
Secondary Ab: Goat Anti-Rabbit IgG H&L (HRP)
Lysate: 1: MCF7, 2: HepG2, 3: Mouse kidney, 4: Rat brain Protein loading quantity: 20 µg
Exposure time: 1 s Predicted MW: 39 kDa
Observed MW: 35 kDa

Tissue: Human colon cancer Section type: Formalin-fixed & Paraffin -embedded section
Retrieval method: High temperature and high pressure Retrieval buffer: Tris/EDTA buffer, pH 9.0 Primary Ab dilution: 1:100 Primary Ab incubation condition: 1 hour at room temperature Secondary Ab: SP Kit(Mouse)(sp-0024) Counter stain: Hematoxylin (Blue) Comment: Color brown is the positive signal for bsm-60489R

Cell line: Jurkat Fixative: 4% Paraformaldehyde Permeabilization: 0.1% Triton X-100 Primary Ab dilution: 1:50 Primary incubation condition: 4°C overnight Secondary Ab: Goat Anti-Rabbit IgG Nuclear counter stain: DAPI (Blue) Comment: Color green is the positive signal for bsm-60489R
