lamin B1 Rabbit pAb

DATASHEET

Host: Rabbit Isotype: IgG

Clonality: Polyclonal

GenelD: 16906 **SWISS:** P14733

Target: lamin B1

Immunogen: KLH conjugated synthetic peptide derived from mouse Lamin B:

361-460/586.

Purification: affinity purified by Protein A

Concentration: 1mg/ml

Storage: 0.01M TBS (pH7.4) with 1% BSA, 0.02% Proclin300 and 50%

Glycerol.

Shipped at 4°C. Store at -20°C for one year. Avoid repeated

freeze/thaw cycles.

Background: The nuclear lamina consists of a two-dimensional matrix of proteins located next to the inner nuclear membrane. The lamin family of proteins make up the matrix and are highly conserved in evolution. During mitosis, the lamina matrix is reversibly disassembled as the lamin proteins are phosphorylated. Lamin proteins are thought to be involved in nuclear stability, chromatin structure and gene expression. Vertebrate lamins consist of two types, A and B. This gene encodes one of the two B type proteins, B1. Alternative splicing results in transcript variants and a duplication of this gene is associated with autosomal dominant adult-onset leukodystrophy (ADLD). [provided by RefSeq, Oct 2010].

Applications: WB (1:500-2000) Reactivity: Mouse

Predicted 64 kDa

Subcellular Location: Nucleus

VALIDATION IMAGES

25 ug total protein per lane of various lysates (see on figure) probed with lamin B1 polyclonal antibody, unconjugated (bs-1840R) at 1:1000 dilution and 4°C overnight incubation. Followed by conjugated secondary antibody incubation at
