

Mouse Anti-Human IgM

Catalog Number: bsm-41524M

Target Protein: Mouse Anti-Human IgM

Form: Liquid

Host: Mouse

Clonality: Monoclonal

Isotype: IgG2a

Applications: ELISA (1:5000-10000)

Reactivity: Human

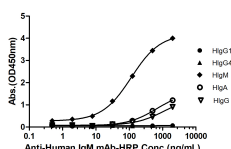

Purification: affinity purified by Protein A

Storage: 0.01M PBS (pH7.4).

Store at -20°C for one year. Avoid repeated freeze/thaw cycles.

Background: IgM normally constitutes about 10% of serum immunoglobulins. IgM antibody is prominent in early immune responses to most antigens and is largely confined to plasma due to its large size. Monomeric IgM is expressed as a membrane bound antibody on the surface of B cells and as a pentamer when secreted by plasma cells. Due to its high valency IgM is more efficient than other isotypes in binding antigens with repeating epitopes (virus particles and red blood cells) and is more efficient than IgG in activating the complement pathway. The gene for the mu constant region contains four domains separated by short intervening sequences.

VALIDATION IMAGES

The binding ability of antigen to antibody was detected by direct ELISA. The enzyme-labeled antibody (Anti-Human IgM Antibody-HRP (Cat. bs-41524M) specifically binds to HlgM, and has no cross reaction or weak reaction with HlgG1, HlgG4, HlgA and IgG.
