CATSPER3 Rabbit pAb**— DATASHEET —**

<p>Host: Rabbit</p> <p>Clonality: Polyclonal</p> <p>GeneID: 347732</p> <p>Target: CATSPER3</p> <p>Immunogen: KLH conjugated synthetic peptide derived from human CATSPER3: 201-300/398.</p> <p>Purification: affinity purified by Protein A</p> <p>Concentration: 1mg/ml</p> <p>Storage: 0.01M TBS (pH7.4) with 1% BSA, 0.02% Proclin300 and 50% Glycerol. Shipped at 4°C. Store at -20°C for one year. Avoid repeated freeze/thaw cycles.</p> <p>Background: CatSper (cation channel, sperm associated proteins) are ion transport proteins located on the surface of sperm cells in the principal piece of the sperm tail. CatSper are vital to sperm motility, fertilization and cAMP-mediated calcium influx in sperm. There are four CatSper proteins in mammalian sperm, namely CatSper (or CatSper1), CatSper2, CatSper3 and CatSper4. CatSper proteins contain a single, six-transmembrane-spanning segment and exhibit the voltage-dependent Ca²⁺ channel four-repeat structure. CatSper proteins are believed to assemble into a heterotetrameric complex, forming an alkalization-activated Ca²⁺-selective channel. Mutations in any of the genes encoding CatSper family proteins can result in male infertility. CatSper3 plays an important role in the hyperactivated motility of sperm cells, a process that is required in the preparation of sperm for fertilization.</p>	<p>Isotype: IgG</p> <p>SWISS: Q86XQ3</p>	<p>Applications: WB (1:500-2000)</p> <p>Reactivity: Mouse, Rat (predicted: Human, Rabbit)</p> <p>Predicted MW.: 46 kDa</p> <p>Subcellular Location: Cell membrane</p>

— VALIDATION IMAGES —

Sample: Lane 1: Mouse Testis Lysates Lane 2: Rat Testis Lysates
 Primary: Anti-CATSPER3 (bs-7136R) at 1/1000 dilution
 Secondary: IRDye800CW Goat Anti-Rabbit IgG at 1/20000 dilution
 Predicted band size: 46kDa Observed band size: 46kDa
