**Background:** The SARS-CoV-2 spike (S) protein is the target of vaccine design efforts to end the COVID-19 pandemic. Despite a low mutation rate, isolates with the D614G substitution in the S protein appeared early during the pandemic, and are now the dominant form worldwide. Here, we analyze the D614G mutation in the context of a soluble S ectodomain construct.**Applications:** WB (1:500-2000)**Reactivity:** SARS-CoV-2**Predicted MW.:** 46 kDa**VALIDATION IMAGES**
