bs-12287R

[Primary Antibody]

HOOK1 Rabbit pAb

techsupport@bioss.com.cn 400-901-9800

- DATASHEET		400 501 5000
Host: Rabbit	lsotype: IgG	Applications: WB (1:500-2000)
Clonality: Polyclonal		
GenelD: 51361	SWISS: Q9UJC3	
Target: HOOK1		
Immunogen: KLH conjugated syr 551-650/728.	nthetic peptide derived from Human HOOK1:	
Purification: affinity purified by Protein A		Reactivity: Human (predicted: Mouse, Rat, Rabbit, Pig, Sheep,
Concentration: 1mg/ml		
 Storage: 0.01M TBS (pH7.4) with 1% BSA, 0.02% Proclin300 and 50% Glycerol. Shipped at 4°C. Store at -20°C for one year. Avoid repeated freeze/thaw cycles. Background: Microtubules mediate the spatial organization of diverse membrane-trafficking systems. The HOOK proteins, HOOK1, HOOK2 and HOOK3, comprise a family of cytosolic coiled-coil proteins that contain conserved N-terminal domains, which attach to microtubules; and more divergent C-terminal domains, which mediate binding to organelles. HOOK1, a cytoskeletal linker protein, may play a role in endocytic membrane trafficking. It exists as a homodimer, most likely mediated through its central coiled-coil domain. HOOK1 interacts with VPS18 and is required for spermatid differentiation, in which it is most likely involved in the positioning of the manchette microtubules and the flagellum. HOOK1 localizes primarily to the cytoplasm and does not associate with the Golgi complex, unlike HOOK3, which participates in the organization of the cis-Golgi compartment. 		Predicted MW.: 85 kDa Subcellular Location: Cytoplasm

- VALIDATION IMAGES -

Sample: Lane 1: Human MCF-7 cell lysates Lane 2: Human A673 cell lysates Primary: Anti-HOOK1 (bs-12287R) at 1/1000 dilution Secondary: IRDye800CW Goat Anti-Rabbit IgG at 1/20000 dilution Predicted band size: 85 kDa Observed band size: 77 kDa

• [IF=4.011] Schwarz et al. Ccdc181 is a microtubule-binding protein that interacts with Hook1 in haploid male germ cells and localizes to the sperm tail and motile cilia. (2017) Eur.J.Cell.Bio. 96:276-288 ICC ;MOUSE. 28283191
