bs-12876R

- DATASHEET -

[Primary Antibody]

BOB1 Rabbit pAb

sales@bioss.com.cn techsupport@bioss.com.cn 400-901-9800

Applications: ELISA (1:5000-10000)

Reactivity: (predicted: Human, Mouse, Rat, Rabbit, Pig, Sheep, Cow, Chicken, Dog, Horse)

Predicted MW.: 27 kDa

Subcellular Location: Nucleus

Host	Rabbit	Isotype: IgG	Apj
Clonality	Polyclonal		B
GenelD	5450	SWISS: Q16633	-
Target	BOB1		
Immunogen	KLH conjugated synthetic per 1-100/256.	otide derived from human BOB1:	
Purification	affinity purified by Protein A		s
Concentration	: 1mg/ml		3
Storage	0.01M TBS (pH7.4) with 1% BS Glycerol. Shipped at 4°C. Store at -20°C freeze/thaw cycles.		
Background	und: POU domain proteins contain a bipartite DNA-binding domain divided by a flexible linker that enables them to adopt various monomer configurations on DNA. The versatility of POU protein operation is additionally conferred at the dimerization level. The POU dimer from the OCT1 gene formed on the palindromic OCT factor recognition element, or PORE (ATTTGAAATGCAAAT), could recruit the transcriptional coactivator OBF1. Studies of tissue-specific expression of immunoglobulin promoters demonstrate the importance of an octamer, ATTTGCAT, and the proteins that bind to it. This is a regulatory element important for tissue- and cell-specific transcription as well as for transcription of a number of housekeeping genes. Oct-1 encodes one protein, NF-A1, which is found in nuclear extracts from all cell types and thus is not specific to lymphoid cells as is the protein NF-A2, which is encoded by Oct-2. A novel protein designated Bob 1 (B cell Oct binding protein 1), alternatively called OBF-1, specifically interacts with Oct-1 and Oct-2, enhancing their transcriptional efficacy. Bob 1 is expressed at highest levels in spleen and peripheral blood leukocytes and represents an Oct co-factor capable of conferring cell-specific activation of Oct-1 and Oct-2. Although having no intrinsic capacity for DNA binding, Bob 1 associates tightly with the octamer motif in the presence of Oct-1 and/or Oct-2. The gene which encodes Bob 1 maps to human chromosome 11q23.1.
