Background: Zinc finger protein 92 (ZNF92) is a 586 amino acid member of the Krüppel C2H2-type zinc finger protein family. Localized to the nucleus, ZNF92 contains 16 C2H2-type zinc fingers and one KRAB domain through which it is thought to be involved in DNA-binding and transcriptional regulation. Three isoforms of ZNF92 exist as a result of alternative splicing events.		Subcellular Location: Nucleus
