has been used to sepa which express BCRP// multidrug resistance	llows efflux of Hoechst dye, a property that arate bone marrow side population cells, ABCG2. Appears to play a major role in the phenotype of a specific MCF-7 breast cancer pressed, the transfected cells become	

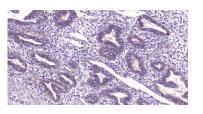

manifest an ATP-dependent increase in the efflux of rhodamine 123. Breast Cancer Resistance Protein (BCRP) is a 70 kDa ATP-Binding Cassette membrane transport protein involved in multidrug resistance. BCRP may be over-expressed in cancer cell lines selected with doxorubicin / verapamil, topotecan or mitoxantrone.
