MTNR1A Antibody Blocking Peptide

Catalog Number: bs-0027P

Activity: Not tested

Purification: HPLC

Storage: Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.

Background: This gene encodes one of two high affinity forms of a receptor for melatonin, the

primary hormone secreted by the pineal gland. This receptor is a G-protein coupled, 7-transmembrane receptor that is responsible for melatonin effects on mammalian circadian rhythm and reproductive alterations affected by day length. The receptor is an integral membrane protein that is readily detectable and localized to two specific regions of the brain. The hypothalamic suprachiasmatic nucleus appears to be

involved in circadian rhythm while the hypophysial pars tuberalis may be responsible

for the reproductive effects of melatonin. [provided by RefSeq, Jul 2008]
