TIMP-2 Antibody Blocking Peptide

Catalog Number: bs-0416P

Activity: Not tested

Purification: HPLC

Storage: Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.

Background: This gene is a member of the TIMP gene family. The proteins encoded by this gene family are

natural inhibitors of the matrix metalloproteinases, a group of peptidases involved in

degradation of the extracellular matrix. In addition to an inhibitory role against

metalloproteinases, the encoded protein has a unique role among TIMP family members in

its ability to directly suppress the proliferation of endothelial cells. As a result, the encoded $% \left(1\right) =\left(1\right) \left(1$

protein may be critical to the maintenance of tissue homeostasis by suppressing the proliferation of quiescent tissues in response to angiogenic factors, and by inhibiting

protease activity in tissues undergoing remodelling of the extracellular matrix. [provided by

RefSeq, Jul 2008].
