AGTR1 Antibody Blocking Peptide

Catalog Number: bs-0630P

Activity: Not tested

Purification: HPLC

Storage: Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.

Background: Angiotensin II is a potent vasopressor hormone and a primary regulator of aldosterone

secretion. It is an important effector controlling blood pressure and volume in the

cardiovascular system. It acts through at least two types of receptors. This gene encodes the type 1 receptor which is thought to mediate the major cardiovascular effects of angiotensin

II. This gene may play a role in the generation of reperfusion arrhythmias following

restoration of blood flow to ischemic or infarcted myocardium. It was previously thought

that a related gene, denoted as AGTR1B, existed; however, it is now believed that there is

only one type 1 receptor gene in humans. At least five transcript variants have been

described for this gene. Additional variants have been described but their full-length nature

has not been determined. The entire coding sequence is contained in the terminal exon and

is present in all transcript variants. [provided by RefSeq].
