SYAP1 Antibody Blocking Peptide

Catalog Number: bs-0121P

Activity: Not tested

Purification: HPLC

Storage: Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.

Background: SYAP1 (synapse-associated protein 1) is a 352 amino acid protein that is ubiquitously

expressed in adult tissues. SYAP1 contains one BSD domain which is a novel domain that is present in basal transcription factors, synapse-associated proteins and several hypothetical

proteins. The BSD domain is characterized by three predicted alpha helices and by

conserved tryptophan and phenylalanine residues, located at the C-terminus of the domain.

The gene that encodes SYAP1 in humans is located on chromosome \boldsymbol{X} . Chromosome \boldsymbol{X}

consists of about 153 million base pairs and nearly 1,000 genes. Color blindness,

hemophilia, and Duchenne muscular dystrophy are well known X chromosome-linked conditions which affect males more frequently as males carry a single X chromosome.
