## **TrkC Antibody Blocking Peptide**

| Catalog Number: | bs-0176P   |
|-----------------|--|
| Activity:       | Not tested   |
| Purification:   | HPLC   |
| Storage:        | Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.               |
| Background:     | The Trk family of nerve growth factor receptors includes Trk A(also referfed to as Trk A       |
|                 | gp140),Trk B and Trk C. The prototype member of this gene family, Trk A, encodes a 140 kDa     |
|                 | cell surface receptor, gp140, the expression of which is restricted in vivo to neurons of the  |
|                 | sensory spinal and cranial gangliaof neurocrest origin. Nerve growth factor (NGF) stimulates   |
|                 | tyrosine phosphorylation of Trk gp 140 in neural cell lines and in embryonic dorsal root       |
|                 | ganglia. By comparison, BDNF and to a lesser extent, NT-3, but not NGF, can induce tyrosine    |
|                 | phophorylayion of Trk B gp 145. The third member of the Trk receptor family, Trk C incodes     |
|                 | a 140 kDa protein, Trk C gp140, that is preferentially expressed in brain tissue and primarily |
|                 | functions as a receptor for NT-3.An additional component of the Trk receptor complex,          |
|                 | NGFR p175, binds to neurotrophic factors with low affinity but is required for efficient       |
|                 | signaling. NGFR p175 accelerates Trk activation and may recruit downstream dffector            |
|                 | molecules to the ligand-bound receptor complex.  |
