NGFR/p75NTR Antibody Blocking Peptide

Catalog Number:	bs-0161P
Activity:	Not tested
Purification:	HPLC
Storage:	Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.
Background:	The low affinity NGFR (Nerve growth factor receptor) is a 75kDa membrane-spanning
	glycoprotein lacking intrinsic tyrosine kinase activity. p75NGFR interacts with TrkA, the high
	affinity NGF receptor and potentiates TrkA signaling at low NGF concentrations. The p75
	receptor binds nerve growth factor, brain-derived neurotrophic factor, neurotrophin-3 and
	neurotrophin-4 with varying specificities. The p75NGFR plays an important role in
	neurotrophic factor signaling and has been shown to modulate the susceptibility of
	selective cellular populations to programmed cell death. It is expressed on many neuronal
	cells types including many embryonic forms and the receptor can be used to isolate
	neuronal progenitor cells. NGF is important for the development, differentiation and
	survival of a variety of neuronal and non-neuronal cells. Its action is mediated by binding to
	two distinct receptors, the high affinity p140 and low affinity p75. p75NGFR binds
	neurotrophins including brain-derived neurotrophic factor (BDNF), neurotrophin-3 (NT-3),
	NT-4/5, and NT-6. p75NGFR belongs to the TNF-R superfamily and is reported to mediate
	NGF-induced apoptosis.
