## **NOS-1 Antibody Blocking Peptide**

Catalog Number:	bs-0156P
Activity:	Not tested
Purification:	HPLC
Storage:	Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.
Background:	The protein encoded by this gene belongs to the family of nitric oxide synthases, which
	synthesize nitric oxide from L-arginine. Nitric oxide is a reactive free radical, which acts as a
	biologic mediator in several processes, including neurotransmission, and antimicrobial and
	antitumoral activities. In the brain and peripheral nervous system, nitric oxide displays
	many properties of a neurotransmitter, and has been implicated in neurotoxicity associated
	with stroke and neurodegenerative diseases, neural regulation of smooth muscle, including
	peristalsis, and penile erection. This protein is ubiquitously expressed, with high level of
	expression in skeletal muscle. Multiple transcript variants that differ in the 5' UTR have been
	described for this gene but the full-length nature of these transcripts is not known.
	Additionally, alternatively spliced transcript variants encoding different isoforms (some
	testis-specific) have been found for this gene.[provided by RefSeq, Feb 2011].
