Myelin P0 protein Antibody Blocking Peptide

bs-0337P
Not tested
HPLC
Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.
Myelin protein-zero is the major structural protein of peripheral myelin, accounting for more
than 50% of the protein present in the sheath of peripheral nerves. Expression of the gene
encoding Myelin protein-zero (MPZ) is restricted to Schwann cells; MPZ is not found in the
CNS. An integral membrane glycoprotein of ~28kDa, Myelin protein-zero is thought to link
adjacent lamellae and thereby stabilize the myelin assembly. The other 3 major
components of myelin are myelin basic protein, myelin proteolipid protein and myelin-
associated glycoprotein.
