
Recombinant HCoV-HKU1 N protein, N-His

Catalog Number: bs-41272P

AA Seq: 1-441/441

Predicted MW: 52.3

Tags: N-His

Activity: Not tested

Endotoxin: Not analyzed

Purity: >90% by SDS-PAGE.

Purification: AC

Form: Liquid

Storage: 20mM Tris, 10% Glycerol.

Stored at -70°C or -20°C. Avoid repeated freeze/thaw cycles.

Background: Coronaviruses are enveloped viruses with a positive-sense RNA genome and with a nucleocapsid of helical symmetry. Coronavirus nucleoproteins localize to the cytoplasm and the nucleolus, a subnuclear structure, in both virus-infected primary cells and in cells transfected with plasmids that express N protein. Coronavirus N protein is required for coronavirus RNA synthesis, and has RNA chaperone activity that may be involved in template switch. Nucleocapsid protein is a most abundant protein of coronavirus. During virion assembly, N protein binds to viral RNA and leads to formation of the helical nucleocapsid. Nucleocapsid protein is a highly immunogenic phosphoprotein also implicated in viral genome replication and in modulating cell signaling pathways. Because of the conservation of N protein sequence and its strong immunogenicity, the N protein of coronavirus is chosen as a diagnostic tool.

VALIDATION IMAGES

The purity of the protein is greater than 90% as determined by reducing SDS-PAGE.
