Clonality: PolyclonalIHC-F (1:100-500)GenelD: 12122SWISS: P70444Target: BidReactivity: MouseImmunogen: KLH conjugated synthetic peptide derived from mouse Bid: 21-120/195.Predicted MW.: 21 kDaPurification: affinity purified by Protein APredicted MW.: 21 kDaConcentration: 1mg/mlStorage: 0.01M TBS (pH7.4) with 1% BSA, 0.02% Proclin300 and 50% Glycerol. Shipped at 4°C. Store at -20°C for one year. Avoid repeated freeze/thaw cycles.Subcellular Location: Cell membrane, CBackground: Bid, a BH3 domain containing proapoptotic Bcl2 family member, is localized in the cytosolic fraction of cells as an inactive precursor. Its active form is generated upon proteolytic cleavage by caspase 8 in the Fas signaling pathway. Cleaved Bid translocates to mitochondria and releases its potent proapoptotic activity, which in turn induces cytochrome c release and mitochondrial damage. The cytochrome c releasing activity of Bid was antagonized by Bcl2. Mutation in the SH3 domain can diminish the cytochrome c releasing activity. In animal model studies, Bid deficient mice areHC-F (1:100-500) IF (1:100-500)	– DATASHEET ———		400-901-9800
