## **Cactin Antibody Blocking Peptide**

Catalog Number: bs-9960P

Activity: Not tested

Purification: HPLC

Storage: Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.

Background: Consisting of around 63 million bases with over 1,400 genes, chromosome 19 makes up over

2% of human genomic DNA. Chromosome 19 includes a diversity of interesting genes and is recognized for having the greatest gene density of the human chromosomes. It is the genetic home for a number of immunoglobulin superfamily members including the killer cell and

leukocyte Ig-like receptors, a number of ICAMs, the CEACAM and PSG family, and

Fc?receptors. Key genes for eye color and hair color also map to chromosome 19. Peutz-

Jeghers syndrome, spinocerebellar ataxia type 6, the stroke disorder CADASIL,

hypercholesterolemia and insulin-dependent diabetes have been linked to chromosome 19.

Translocations with chromosome 19 and chromosome 14 can be seen in some

lymphoproliferative disorders and typically involve the proto-oncogene BCL3. The C19orf29 gene product has been provisionally designated C19orf29 pending further characterization.
