## **KIAA0930 Antibody Blocking Peptide**

Catalog Number:	bs-9987P
Activity:	Not tested
Purification:	HPLC
Storage:	Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.
Background:	C22orf9 is a 404 amino acid protein that exists as three alternatively spliced isoforms and is
	encoded by a gene located on human chromosome 22, which contains over 500 genes and
	about 49 million bases. As the second smallest human chromosome, chomosome 22
	contains a wide variety of genes with numerous functions. Phelan-McDermid syndrome,
	Neurofibromatosis type 2 and autism are associated with chromosome 22. A schizophrenia
	susceptibility locus has been identified on chromosome 22 and studies show that 22q11
	deletion symptoms include a high incidence of schizophrenia. Translocations between
	chromosomes 9 and 22 may lead to the formation of the Philadelphia Chromosome and the
	subsequent production of the novel fusion protein, BCR-Abl, a potent cell proliferation
	activator found in several types of leukemia.
