C-Myc-Tag Peptide

Catalog Number:	bs-33024P
Activity:	Not tested
Purification:	HPLC
Storage:	Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.
Background:	The protein encoded by this gene is a multifunctional, nuclear phosphoprotein that plays a
	role in cell cycle progression, apoptosis and cellular transformation. It functions as a
	transcription factor that regulates transcription of specific target genes. Mutations,
	overexpression, rearrangement and translocation of this gene have been associated with a
	variety of hematopoietic tumors, leukemias and lymphomas, including Burkitt lymphoma.
	There is evidence to show that alternative translation initiations from an upstream, in-frame
	non-AUG (CUG) and a downstream AUG start site result in the production of two isoforms
	with distinct N-termini. The synthesis of non-AUG initiated protein is suppressed in Burkitt's
	lymphomas, suggesting its importance in the normal function of this gene. [provided by
	RefSeq, Jul 2008].
