Ubiquitin Antibody Blocking Peptide

Catalog Number:	bs-33296P
Activity:	Not tested
Purification:	HPLC
Storage:	Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.
Background:	This gene encodes ubiquitin, one of the most conserved proteins known. Ubiquitin has a
	major role in targeting cellular proteins for degradation by the 26S proteosome. It is also
	involved in the maintenance of chromatin structure, the regulation of gene expression, and
	the stress response. Ubiquitin is synthesized as a precursor protein consisting of either
	polyubiquitin chains or a single ubiquitin moiety fused to an unrelated protein. This gene
	consists of three direct repeats of the ubiquitin coding sequence with no spacer sequence.
	Consequently, the protein is expressed as a polyubiquitin precursor with a final amino acid
	after the last repeat. An aberrant form of this protein has been detected in patients with
	Alzheimer's disease and Down syndrome. Pseudogenes of this gene are located on
	chromosomes 1, 2, 13, and 17. Alternative splicing results in multiple transcript variants.
