chloramphenicol/OVA

Catalog Number:	bs-0971PA
AA Seq:	Coupling protein
Tags:	N/A
Activity:	No
Endotoxin:	Not analyzed
Form:	Liquid
Storage:	0.01M TBS(pH7.4).
	Stored at -70°C or -20°C. Avoid repeated freeze/thaw cycles.
Background:	Chloramphenicol is a bacteriostatic antimicrobial originally derived from the bacterium
	Streptomyces venezuelae, isolated by David Gottlieb, and introduced into clinical practice in
	1949. It was the first antibiotic to be manufactured synthetically on a large scale, and
	alongside the tetracyclines, is considered the prototypical broad-spectrum antibiotic.
	Chloramphenicol is effective against a wide variety of Gram-positive and Gram-negative
	bacteria, including most anaerobic organisms. Due to resistance and safety concerns, it is no
	longer a first-line agent for any indication in developed nations and has been replaced by
	newer drugs in this setting, although it is sometimes used topically for eye infections. In low-
	income countries, chloramphenicol is still widely used because it is exceedingly inexpensive
	and readily available.
