## **MAPKK2 Antibody Blocking Peptide**

| Catalog Number: | bs-0223P  |
|-----------------|---|
| Activity:       | Not tested  |
| Purification:   | HPLC  |
| Storage:        | Shipped at 4°C. Stored at -20°C for one year. Avoid repeated freeze/thaw cycles.              |
| Background:     | The protein encoded by this gene is a dual specificity protein kinase that belongs to the MAP |
|                 | kinase kinase family. This kinase is known to play a critical role in mitogen growth factor   |
|                 | signal transduction. It phosphorylates and thus activates MAPK1/ERK2 and MAPK2/ERK3.          |
|                 | The activation of this kinase itself is dependent on the Ser/Thr phosphorylation by MAP       |
|                 | kinase kinase kinases. Mutations in this gene cause cardiofaciocutaneous syndrome (CFC        |
|                 | syndrome), a disease characterized by heart defects, mental retardation, and distinctive      |
|                 | facial features similar to those found in Noonan syndrome. The inhibition or degradation of   |
|                 | this kinase is also found to be involved in the pathogenesis of Yersinia and anthrax. A       |
|                 | pseudogene, which is located on chromosome 7, has been identified for this gene. [provided    |
|                 | by RefSeq, Jul 2008].   |
