| Background:     | The SARS-CoV-2 spike (S) protein is the target of vaccine design efforts to end the COVID-19 |
|                 | pandemic. Despite a low mutation rate, isolates with the D614G substitution in the S protein |
|                 | appeared early during the pandemic, and are now the dominant form worldwide. Here, we        |
|                 | analyze the D614G mutation in the context of a soluble S ectodomain construct.               |

## VALIDATION IMAGES

Measured by its binding ability in a functional ELISA. Immobilized human ACE2, His-Avi Tag (Cat: bs-46001P) at 2µg/ml (100ul/Well) can bind SARS-CoV-2 Spike RBD (L452R, T478K), His Tag (Cat: bs-43048P), the EC50 is 41ng/ml.

The purity of the protein is greater than 90% as determined by reducing SDS-PAGE.
