## Goat IgM / APC

Catalog Numberbs-0370P-APCForm:LiquidApplications:Isotype Control, etc.Storage:0.01M TBS (pH7.4) with 1% BSA, 0.02% Proclin300 and 50% glycerol.Background:IgM normally constitutes about 10% of serum immunoglobulins. IgM antibody is prominent<br/>in early immune responses to most antigens and is largely confined to plasma due to it's<br/>large size. Monomeric IgM is expressed as a membrane bound antibody on the surface of B<br/>cells and as a pentamer when secreted by plasma cells. Due to it's high valency IgM is more<br/>efficient than other isotypes is binding antigens with repeating epitopes (virus particles and<br/>red blood cells) and is more efficient than IgG in activiating the complement pathway. The<br/>gene for the mu constant region contains four domains separated by short intervening<br/>sequences.
