产品介绍:	This gene is one of several CC cytokine genes clustered on the p-arm of chromosome 9.
	Cytokines are a family of secreted proteins involved in immunoregulatory and inflammatory
	processes. The CC cytokines are proteins characterized by two adjacent cysteines. The
	cytokine encoded by this gene may play a role in normal lymphocyte recirculation and
	homing. It also plays an important role in trafficking of T cells in thymus, and in T cell and B
	cell migration to secondary lymphoid organs. It specifically binds to chemokine receptor
	CCR7. [provided by RefSeq, Jul 2008]
