产品介绍:	IL-12 protein is a cytokine produced primarily by monocytes and to a lesser extent by
	lymphocytes. This cytokine has pleiotropic effects in immunoregulation and inflammation.
	It down-regulates the expression of Th1 cytokines, MHC class II Ags, and costimulatory
	molecules on macrophages. It also enhances B cell survival, proliferation, and antibody
	production. This cytokine can block NF-kappa B activity, and is involved in the regulation of
	the JAK-STAT signaling pathway. Knockout studies in mice suggested the function of this
	cytokine as an essential immunoregulator in the intestinal tract.
