产品介绍:	The protein encoded by this gene is a pleiotropic cytokine produced by activated T cells.
	This cytokine is a ligand for interleukin 4 receptor. The interleukin 4 receptor also binds to
	IL13, which may contribute to many overlapping functions of this cytokine and IL13. STAT6,
	a signal transducer and activator of transcription, has been shown to play a central role in
	mediating the immune regulatory signal of this cytokine. This gene, IL3, IL5, IL13, and CSF2
	form a cytokine gene cluster on chromosome 5q, with this gene particularly close to IL13.
	This gene, IL13 and IL5 are found to be regulated coordinately by several long-range
	regulatory elements in an over 120 kilobase range on the chromosome. Two alternatively
	spliced transcript variants of this gene encoding distinct isoforms have been reported.
