
弗氏不完全佐剂（原装进口） Freund's Adjuvant Incomplete

产品编号: bs-s2

保存条件: Store at 2-8°C.

产品介绍: Other Notes:

Each mL contains 0.85 mL paraffin oil and 0.15 mL mannide monooleate.

Application:

Freund's Adjuvants may be used to produce water-in-oil emulsions of immunogens. Antigens in water-in-oil emulsions stimulate high and long-lasting antibody responses which can be attributed to the slow release of antigen.

Freund's adjuvant (incomplete) lacks the Mycobacteria found in Complete Freund's Adjuvant so it minimizes the side-effects. It is used for boost injections. It was used to emulsify antigens that are injected into animals to produce monoclonal antibodies from the antiserum.
