— DATASHEET —

Host: Rabbit**Isotype:** IgG**Clonality:** Recombinant**CloneNo.:** 3D8**GeneID:** 8350**SWISS:** P68431**Target:** Mono-Methyl-Histone H3(R129)**Immunogen:** A synthesized peptide derived from human Histone H3.1 around the methylation site of R129: LA-(Me)R-RI.**Purification:** affinity purified by Protein A**Storage:** 10mM phosphate buffered saline(pH 7.4) with 150mM sodium chloride, 0.05% BSA, 0.02% Proclin300 and 50% glycerol. Store at 4°C for short term. Store at -20°C for long term. Avoid repeated freeze/thaw cycles.**Background:** Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.**Applications:** WB (1:1000-2000)**Reactivity:** Human, Mouse**Predicted MW.:** 15 kDa**Subcellular Location:** Nucleus
