Background: Cytokine that plays a critical role in modulating tissue responses

during inflammation. Plays an essential role in the regeneration of epithelial cells to maintain barrier function after injury and for the prevention of further tissue damage. Unlike most of the cytokines, has no effect on immune cells. Signals through a heterodimeric receptor composed of two subunits, the specific receptor IL22RA1 which is present on non-immune cells in many organs and the shared subunit

İL10RB.

Applications: WB (1:1000-2000)

Reactivity: Human

Predicted _{20 kDa}
