
Valspodar

产品编号: D50701

CAS: 21584-18-7

保存条件: Store at -20°C for 3 year(Powder); In DMSO or others solvent store at 2-4°C for two weeks, at -20°C for six months.

产品介绍: **基本信息:**

CAS: 121584-18-7

分子式: C₃₆H₇₀N₄O₅

分子量: 1214.62

纯度: 99%

溶解性: DMSO (12 mg/mL, 9.88 mM;)

性状: 白色到米色粉末

产品简介:

伐司朴达 (Valspodar; PSC 833) 是一种选择性的 P-糖蛋白抑制剂, 已被用作化学增敏剂用于实验性癌症的研究。

作用靶点: P-glycoprotein;

作用通路: Membrane Transporter/Ion Channel;

体外研究: Cancer

体外研究: Valspodar (PSC833) has no cytotoxicity effects at up to the concentration of 0.75µg/mL. Valspodar (0.25, 0.5 and 0.75µg/mL) and DOX-L are added to the DOX resistant cells, and cell kill efficacy of MDR cell type increases significantly when valspodar is administered alongside DOX-L. Valspodar 0.5 and 0.75µg/mL, in combination with all concentrations of DOX, are most toxic and kill more than 70% of the resistant cells.

Pretreatment with PSC833 decreases the IC₅₀ value of NSC 279836 in MDA-MB-435mdr cells to 0.4±0.02µM in MDR cells and almost completely reverses the resistance of MDR cells to NSC 279836.

体内研究: valspodar (10mg/kg,o.p.) exhibits minimal blood-cell partitioning as reflected in its low mean blood-to-plasma ratio of approximately 0.52. Valspodar displays properties of slow clearance and a large volume of distribution. Valspodar shows properties of low hepatic extraction and wide distribution, similar to that of its structural analogue CsA.

Preadministration of PSC833 to mice increases NSC 279836 fluorescent intensity in MDR tumor to 94% of that in the wild-type tumors.
