|                 | This gene encodes a subunit of the Integrator complex which is involved in the cleavage of    |
|                 | small nuclear RNAs U1 and U2 within the nucleus. The encoded protein associates with RNA      |
|                 | polymerase II and is recruited to the U1 and U2 small nuclear RNA genes. Alternative splicing |
|                 | results in multiple transcript variants. [provided by RefSeq, Nov 2012]                       |
