Background: MUC16 (CA125) is a serum marker that is used routinely in gynecologic practice to monitor

patients with ovarian cancer. It is a mullerian duct differentiation antigen that is

overexpressed in epithelial ovarian cancer cells and secreted into the blood, although its expression is not entirely confined to ovarian cancer. Most biochemical studies have

concluded that MUC16 is a high molecular mass glycoprotein, although estimates of its size

range from 200 to 2000 kDa with smaller "subunits" being described by some

investigators.
