## **Recombinant Human UBB Protein, N-His**

Catalog Number:	bs-105738P
Species:	Human
AA Seq:	1-76/229
Predicted MW:	10.87 kDa
Tags:	N-His
Purity:	>90% as determined by SDS-PAGE.
Purification:	AC
Form:	Lyophilized
Storage:	Lyophilized from a solution in PBS pH 7.4, 0.02% NLS, 1mM EDTA, 4% Trehalose, 1%
	Mannitol.
	Use a manual defrost freezer and avoid repeated freeze thaw cycles. Store at 2 to $8^\circ$ C for
	frequent use. Store at -20 to -80°C for twelve months from the date of receipt.
Background:	This gene encodes ubiquitin, one of the most conserved proteins known. Ubiquitin has a
	major role in targeting cellular proteins for degradation by the 26S proteosome. It is also
	involved in the maintenance of chromatin structure, the regulation of gene expression, and
	the stress response. Ubiquitin is synthesized as a precursor protein consisting of either
	polyubiquitin chains or a single ubiquitin moiety fused to an unrelated protein. This gene
	consists of three direct repeats of the ubiquitin coding sequence with no spacer sequence.
	Consequently, the protein is expressed as a polyubiquitin precursor with a final amino acid
	after the last repeat. An aberrant form of this protein has been detected in patients with
	Alzheimer's disease and Down syndrome. Pseudogenes of this gene are located on
	chromosomes 1, 2, 13, and 17. Alternative splicing results in multiple transcript variants.
