Background:	This gene encodes a member of the cytochrome P450 superfamily of enzymes. The
	cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in
	drug metabolism and synthesis of cholesterol, steroids and other lipids. This protein
	localizes to the mitochondrial inner membrane and has steroid 11-beta-hydroxylase activity.
	In addition to this activity, the 18 or 19-hydroxylation of steroids and the aromatization of
	androstendione to estrone have also been ascribed to cytochrome P450 XIB.
